The After Fire Equipment Wipe

De-Wipe®

www.dewipe.com

THE FACTS:

CANCER
is the leading cause of death for Fire-fighters

CROSS CONTAMINATION
transfers carcinogens from equipment to personnel

Fire-fighters are
3x more likely to develop cancer than anyone else

ALL EQUIPMENT
at incidents becomes contaminated

✓The Solution...

De-Wipe - Equipment Wipes are scientifically formulated and scientifically proven to help remove the risk of carcinogens and bacteria from equipment thanks to the added ingredient, a proactive compound that defends against hydrocarbons such as soot and dirt with ease

- ***Scientifically tested and proven on 17 of the most toxic Chlorinated Dioxins***
- ***Scientifically tested and proven on 8 of the most toxic PAH's (Polycyclic Aromatic Hydrocarbons)***
- ***Removes >91% of Benzoapyrene***

BIODEGRADABLE
Keeping you green

The After Fire Equipment Wipe

www.dewipe.com

A simple solution to fire-fighter and first responder safety, welfare and hygiene on scene

The recognition of carcinogens remaining on personal protective equipment (PPE) has resulted in a structured cleaning approach for potentially contaminated kit in UK Fire and Rescue Services but what about the equipment and cross contamination?

Global studies have demonstrated that firefighters are up to three times more likely than the general population to develop cancer before age 75. This figure rises to five times where there is continuous exposure through a failure to properly clean off contaminants.

De-Wipe Equipment Wipes are an 'after the fire' wipe to use on equipment which has been designed and tested to provide immediate and long-lasting protection from hazardous contaminants, to address the risks associated with carcinogens and cross contamination

De-Wipe equipment wipes are the only scientifically proven wipe that removes carcinogens and cleans without damaging equipment.

De-Wipe Equipment Wipes are designed, developed and delivered in the UK and comes packed in handy re-sealable 80 pack tub. They are 100% biodegradable so you can be clean and green.

Safe to use on:

- Composites
- Plastics
- Polymers
- Metals
- EPDM
- Silicone
- Rubber
